start here

How to use this guide

Do not scroll through 693 roles and apply to everything. Recruiters can tell. Pick a lane, shortlist 10 to 15 roles that truly match you, and send a tailored application to each one. Quality beats volume every single time.

Where the jobs are

Data & Analytics	58
AI & Machine Learning	18
Software Engineering	191
Product	53
Design	26
Marketing & Content	55
Sales & Partnerships	71
HR & People	33
Finance, Legal & Operations	188

Your 3-step plan for this week

1. **Today:** open your field's section, filter by your experience band, and shortlist 10 to 15 roles.
2. **Day 2:** use Prompt 01 and 02 to fix your resume and tailor it to your top 5.
3. **Day 3 to 7:** apply to 3 roles a day, ask for 1 referral a day with Prompt 03, and log everything in a tracker.

Freshers: jump straight to the Fresher Picks page. Every intern and entry-level role is pulled together for you.

How to read the tables

- Roles are grouped by **field**, then by **experience band**, freshers first.
- **Experience** is taken from each job posting. "Not stated" means the posting gives no number, so read the JD.
- Tap the gold **Apply** button or the blue link under each role to open the original posting.
- **Link not opening?** Your preview app may block taps. Open this PDF in Chrome, Google Drive, Adobe Acrobat or your phone's Files app, or long-press and copy the link printed under the role.
- Salary estimates are on the Company Directory page. They are rough company-wide ranges, not the pay for a specific role.

Stay safe

- **Never pay anyone to get a job.** No real company asks for a fee, deposit or "training charge".
- Apply only through the official link or the company careers page.
- Be careful with offers on WhatsApp or Telegram from unknown numbers.
- Roles fill fast. If a link is closed, check the company careers page for similar openings.

the AI advantage

Apply smarter with AI: the 6-step system

AI will not get you the job. It gets you to the interview faster, with a sharper resume and better preparation. Use ChatGPT, Claude or Gemini, any of them works. Here is the system.

1

Pick 10 to 15 roles

Choose from this guide. Copy each JD into a notes file before the link closes.

2

Fix your base resume

Run Prompt 01 once. Fill every [ADD NUMBER] with a real figure.

3

Tailor per job

Run Prompt 02 for every role. Aim for a match score of 75+ before you apply.

4

Find a referral

Search the company on LinkedIn, find people in your target team, send Prompt 03.

5

Apply and track

Log company, role, date, referral and status in a simple sheet. Follow up after 7 days.

6

Prepare before the call

Prompt 05 for research, Prompt 06 for a mock interview. Practise out loud.

Use AI for

- Finding missing keywords between your resume and the JD
- Rewriting weak bullets into clear, result-first lines
- Drafting referral messages and cover notes
- Mock interviews and company research

Never let AI

- Invent experience, tools, numbers or certificates you do not have
- Send mass auto-applications using bots
- Write in a style that does not sound like you in the interview
- Replace reading the JD yourself

copy, paste, win

7 AI prompts for your job hunt

Replace everything in [BRACKETS] with your own details. Paste the job description from the Apply link wherever a prompt asks for it.

PROMPT 01

Build an ATS-friendly resume from scratch

Use when you are starting fresh or your current resume is a mess.

```
Act as a senior tech recruiter who screens resumes for Indian startups.
I am applying for [TARGET ROLE] roles with [X] years of experience.

Here is everything about me (education, projects, internships, jobs, tools, achievements):
[PASTE YOUR RAW DETAILS]

Build a one-page ATS-friendly resume with these rules:
1. Single column, no tables, no icons, standard headings only.
2. Every bullet = action verb + what I did + measurable result.
3. Put a Skills section with the exact keywords a [TARGET ROLE] JD uses.
4. Do NOT invent any company, number, tool or result. If a number is missing,
   write [ADD NUMBER] so I can fill it honestly.
5. At the end, list 3 weak spots in my profile and how to fix each in 2 weeks.
```

PROMPT 02

Tailor your resume to one job in 5 minutes

Do this for every single application. It is the biggest shortlist booster.

```
Here is a job description:
[PASTE JD FROM THE APPLY LINK]

Here is my resume:
[PASTE RESUME]

1. Give me a match score out of 100 and explain it in 3 lines.
2. List the top 10 keywords from the JD that are missing in my resume.
3. Rewrite my summary and my 5 most relevant bullets to match this JD,
   using only experience I actually have.
4. Tell me which project of mine to move to the top for this role.
```

PROMPT 03

Get a referral on LinkedIn

A referral can jump you past hundreds of cold applicants.

```
Write a LinkedIn connection note (under 280 characters) and a follow-up
message (under 80 words) to [NAME], who works as [THEIR ROLE] at [COMPANY].

I am applying for [ROLE] (job link: [LINK]).
My strongest proof for this role: [ONE PROJECT OR RESULT].

Tone: polite, specific, zero begging. Ask for a referral only if they
feel my profile fits, and make it easy to say yes.
```

PROMPT 04

Write a short cover note or email

Some forms ask "Why do you want to join us?" Never leave it blank.

```
Write a 120-word note for the [ROLE] role at [COMPANY].
What the company does: [1 LINE FROM THEIR WEBSITE]
Why I want this role: [YOUR REAL REASON]
My proof: [2 RESULTS FROM MY RESUME]

No generic lines like "I am passionate" or "esteemed organisation".
End with one line on what I can do in my first 90 days.
```

PROMPT 05

Research the company in 10 minutes

Walk into the interview knowing more than other candidates.

```
I have an interview at [COMPANY] for [ROLE].
Using only what you can verify, tell me:
1. What the company sells, to whom, and how it makes money.
2. Its main competitors in India.
3. 3 recent product launches or news items (with dates and sources).
4. 3 smart questions I can ask the interviewer at the end.
If you are not sure about something, say so instead of guessing.
```

PROMPT 06

Run a mock interview

Practise out loud. Paste your answers and get scored.

```
Be my interviewer for the [ROLE] role at [COMPANY]. JD: [PASTE JD]
Ask me 1 question at a time: 4 technical, 3 scenario-based, 3 HR.
After each answer, score me out of 10, tell me what was missing,
and show a stronger version of my answer. Wait for my reply each time.
At the end, give me my top 3 areas to revise before the real interview.
```

PROMPT 07

Fresher with no experience? Build proof

No experience is fixed with projects that look like real work.

```
I am a fresher targeting [ROLE]. I know [SKILLS, e.g. SQL, Excel, Power BI].
Suggest 3 portfolio projects that mimic real work at a company like
[COMPANY FROM THIS LIST]. For each: the business problem, a free dataset
I can use, the steps, and 3 resume bullets I can honestly write after
finishing it. Keep each project doable in 1 weekend.
```

Fresher Picks

Every intern, fresher and entry-level role in this guide, across all fields.

COMPANY	ROLES	MAIN HIRING AREAS	EST. CTC (COMPANY-WIDE)
Zeta	**27**	Finance, Software, HR	8–40 LPA

CTC ranges are rough company-wide estimates, not taken from job postings, and they change by role, level and city. "Not published" means no estimate was available. Use them only to set expectations before you negotiate.

one last thing

Data roles are hiring. Make sure you are ready.

Most analyst and data engineering roles in this guide test SQL in the first round, and many ask for Power BI or Python. If those are your weak spots, fix them before you apply. Follow along for daily SQL interview questions, real projects and job updates like this one.
